Executive Summary

At Maxtel, we provide dedicated AI Bare Metal Servers so you can fully leverage their resources for your Artificial Intelligence projects. With a range of configurations, including multiple GPU options, disk types, and cooling setups, you can create a tailored solution that precisely fits your needs. All delivered as a service, for fixed-term periods. You can also add complementary services such as Backup as a Service or monitoring.

Key Features

- Dedicated bare metal infrastructure with configurable GPU profiles.

- Custom combinations of storage, cooling, and compute resources.

- Service model with fixed-term capacity and expert support.

Business Benefits

- Maximum performance and isolation for AI-intensive workloads.

- Faster execution for model training and specialized processing.

- Predictable operations with optional backup and monitoring add-ons.
