

### Executive Summary

Maxtel offers its clients a comprehensive range of options for their backup needs. On one side, full-flash or mechanical-disk technology. On the other, capacity and speed. We deliver the exact combination the client requires, fully tailored to their specifications. Additionally, we can provide standby computing power so that, in the event of a disaster, those backups can be executed on our machines. This way, the client only pays for compute power when it is used, allowing them to restore their infrastructure without pressure, while ensuring that end users continue to operate without interruption.

### Key Features

- Flexible technology selection: full-flash or mechanical-disk storage.
- Capacity and speed configuration adjusted to workload requirements.
- Standby compute power for disaster scenarios and fast recovery execution.
- Pay-per-use compute model for efficient cost control during contingencies.
- Expert guidance to design an efficient and well-structured backup strategy.

### Business Benefits

- Higher resilience for backup and recovery scenarios.
- Controlled operational costs with pay-per-use model when needed.
- Scalable service aligned with business continuity requirements.
