Executive Summary

Maxtel's Video Streaming Services, available in both Live and On Demand formats, enable organizations to deliver audiovisual content securely, reliably, and with professional-grade quality. Designed for businesses that need to reach internal or external audiences without interruptions, this service provides a scalable, flexible platform tailored to the specific needs of each project. Backed by high-performance infrastructure, global content distribution, and advanced management capabilities, Maxtel ensures a stable streaming experience with minimal latency and robust technical features, ideal even for high-demand scenarios. North, Central and South America (except Brazil, Nicaragua, Cuba, and Haiti), from our data centers in:

Key Features

- Live Streaming: Real-time transmissions with low latency, ideal for corporate events, training sessions, conferences, launches, and internal communications.

- On Demand Content: Secure storage and immediate playback of recorded videos from any location.

- Automatic Scalability: Capacity to handle everything from small audiences to thousands of simultaneous viewers without quality degradation.

- Global CDN Delivery: Optimized content distribution through a worldwide delivery network, ensuring speed and stability across regions.

- Advanced Security: Access controls, encryption, user authentication, and granular permission management.

- Multi-platform Integration: Compatible with corporate websites, LMS platforms, mobile apps, and internal systems.

- Professional Quality: Support for HD, Full HD, and 4K with dynamic bitrate adaptation based on user connectivity.

- Comprehensive Analytics: Detailed insights into audience behavior, playback metrics, engagement levels, connection quality, and overall performance.

- Dedicated Technical Support: Assistance during live events, real-time monitoring, and pre-event configuration support.

- Billing Tools: Integrated capabilities for consumption-based billing, per-event or per-user pricing, and automated commercial models.

Business Benefits

- More effective communication, reaching global audiences without geographic limitations.

- Higher professionalism, with stable, high-quality streaming and zero interruptions.

- Cost optimization, eliminating the need for internal infrastructure or specialized equipment.

- Permanent availability, allowing users to access content whenever they need it.

- Total flexibility, ideal for corporate, educational, commercial, or large-scale distribution use cases.

- Guaranteed security, ensuring content is protected and accessible only to authorized users.
